Can you help me to look for and talk about squares?

Grown-ups:

Can you help your child look for squares.

Everywhere you go can you help them to spot a square. You could talk about the properties of a square; that it has 4 sides of equal length and 4 corners. If your child is interested you could introduce other words related to a square such as 'vertices' (another name for angle) or 'right angle' (which is a 90° angle). You could post your child's interest in squares on their tapestry account.
